Q.R.

HERBAL ACTIVATOR

How it works

It is seldom, if ever, that we can improve on nature, and this is specially true in anything relating to the soil. That is, perhaps, the chief reason for the almost miraculous way in which Q.R. helps to break down waste materials into sweet-smelling LIVE compost. Q.R. is a fine, perfectly-blended powder containing seven herbal ingredients. It is 100% organic and is very attractive to the micro-organisms which themselves do the job of breaking down the heap and converting it into readily assimilable food for your plants. A properly made Q.R. compost heap is always teeming with healthy vigorous worms; always alive and ready to pass on its vital qualities to your garden.

How to use it

Full instructions are enclosed in every packet, but the process is, in fact, simplicity itself. A teaspoonful of the powder is mixed with a pint of water and allowed to stand for three or four hours. The powder will not dissolve but is held in suspension and has to be shaken before use. It will keep for at least three weeks, and should only be thrown away if it begins to smell sour. As the compost heap is made, Q.R. liquid is sprinkled over the surface of every layer five or six inches deep. Very little is needed—only about three or four tablespoonfuls for each layer in the case of an ordinary-sized garden heap. There is, fortunately, no need at all to be very particular as to the exact amount used.

All compost making is an art and by no means an exact science. But it is an easily learnt art, and very well repays the small amount of trouble needed to acquire it. Properly made, your Q.R. compost will amaze you. It will equal in value twice the same volume of an average farmyard manure.
